

What is the output of this code

```
void len(char a[]){
    int i=0;
    while(a[i] !='\0'){
        i++;
    }
    cout<<i;
}

int main()
{
    char c[]="abcde\0 123";
    len(c);
    return 0;
}
```

- ☐ a. 7
- ☒ b. 5
- ☐ c. other

what is the output of this question

```
int main()
{
    char a[]="abcd";
    char b[]="klmn";
    char c[]="1234\0 56";
    if (strcmp(a,b))
        strcpy(a,c);
    else
        strcpy(a,b);
    cout<<a;
    return 0;
}
```

- ☐ a. other
- ☐ b. abcd
- ☐ c. klmn
- ☒ d. 1234

what is the output for this code?

```
int main()
{
    int sum=0;
    int a[4][4]={{1,2,3,4},{1,2,3,4},{1,2,3,4},{1,2,3,4}};
    for(int r=0;r<=3;r++)
        for(int c=0;c<=3;c++){
            if(r==c){
                sum+=a[r][c];
            }
        }
    cout<<sum;
    return 0;
}
//-----
```

////sum+=a[r][c];

What can be said about the function fun and the code output?

```
int fun(int x, int y){  
    return max(x,y);  
}
```

```
int main()  
{  
    cout<<fun(9,-1);  
    return 0;  
}
```

- ☐ a. The the function returns data type is char,
The output is -1
- ☐ b. other
- ☐ c. The function return data type is float

The output is 2

اتحاد سنافر البوليتكنك

- ☒ d. The function return data type is int output is 9
