

How many variable definition statements in this code? Enter answer as 1 or 2 or 3 below

```
1  #include <iostream>
2  using namespace std;
3  #include <string>
4  int main()
5  {
6      int x=1;
7      int y=3;
8      int z;
9
10 }
```

Answer: 2

How many block of code in the body of main? Enter an integer as answer

```
1  #include <iostream>
2  using namespace std;
3  #include<string>
4  int main()
5  {
6      {
7          int x=2;
8      }
9      {
10         int x=4;
11     }
12     return 0;
13 }
```

Answer:

2

Which line of code outputs an ASCII in this code? Enter your answer below as integer

```
1  #include <iostream>
2  using namespace std;
3  #include<string>
4  int main()
5  {
6      char c='a';
7      cout<<int(c)<<endl;
8      cout<<c;
9      cout<<'b';
10
11 }
```

Answer:

7

The correct answer is: 7

What is the output for this code? Enter your answer below

```
1  #include <iostream>
2  using namespace std;
3  #include<string>
4  int main()
5  {
6      cout<<1;
7      return 1;
8      cout<<2;
9      return 0;
10
11 }
```

Answer:

1

in what lines in this code variable x will cause naming collision?

answer: line 12 will cause naming collision since no two variables with the same name could defined in the same block of code

```
1  #include <iostream>
2  using namespace std;
3  #include<string>
4  int main()
5  {
6      int x=1;
7      {
8          int x=3;
9      }
10     {
11         int x=4;
12         float x=5;
13     }
14
15 }
```
