

Choose the correct answer

1- class A {int i; public: A(int ii = 0) : i(ii) {} void show() { cout << i << " "; } class B {int x; public: B(int xx) : x(xx) {} operator A() const { return A(x); } void g(A a) {a.show(); } int main() { B b(10); g(b); g(20); return 0; }	A-Compiler Error B- 10 20 C- 20 20 D- 10 10	2- class Test2(int y; }; class Test {int x; Test2 t2; public: operator Test2 () { return t2; } operator int () { return x; } void fun (int x) { cout << "fun(int) called"; } void fun (Test2 t) { cout << "fun(Test 2) called"; } } int main() {Test t; fun(t); return 0; }	A- fun(Test 2) called B- fun(int) called C- Compiler Error
3- template <typename T> void fun(const T&x) {static int count = 0; cout << "x = "; cout << x; cout << " count = "; cout << count << endl; ++count; } int main() {fun<int>(1); fun<int>(1); fun<double>(1.1); return 0; }	A- x = 1 count = 0 x = 1 count = 1 x = 1.1 count = 0 B- x = 1 count = 0 x = 1 count = 0 x = 1.1 count = 0 C- x = 1 count = 0 x = 1 count = 1 x = 1.1 count = 2 D- Compiler Error	4- class Base {public: void show() {cout << "In Base"; } }; class Derived: public Base {public: int x; void show() { cout << "In Derived"; } Derived() { x = 10; } }; int main() { Base *bp, b; Derived d; bp = &d; bp->show(); cout << bp->x; return 0; }	A- Compiler Error in line " bp->show()" B- Compiler Error in line " cout << bp->x" C- In Base 10 D- In Derived 10

5- <pre> class Base {public: virtual void show() {cout<<"In Base"; }}; class Derived: public Base {public: void show() {cout<<"In Derived";}}; int main(void) { Base *bp = new Derived; bp->Base::show(); return 0; }</pre>	A- In Base	6- Identify the mistake: <pre> class Base { public: virtual void func() {} }; class Derived : public Base { void func(); };</pre>	A- No error
	B- In Derived		B- Missing function body in Derived
	C- Compiler Error		C- Syntax error in class declaration
	D- Runtime Error		D- Incorrect use of virtual function
