

assessment plan → migration
→ validate → manage.

Q1. Multiple-Choice Questions

(15 POINTS)

12

Choose the most appropriate answer from the options provided.

1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
B	B	C	A	C	B	C	B	A	B	A	B	D	D	D

1. Which cloud service model allows developers to build and deploy applications without worrying about underlying infrastructure?

- a) Infrastructure as a Service (IaaS)
- b) Platform as a Service (PaaS)
- c) Software as a Service (SaaS)
- d) Function as a Service (FaaS)

2. Which of the following is a cloud deployment model that is specifically designed for a single organization and can be managed internally or externally?

- a) Public cloud
- b) Private cloud
- c) Hybrid cloud
- d) Community cloud

3. Which cloud service model provides the highest level of abstraction and allows users to access applications over the internet without the need for installation or maintenance?

- a) Infrastructure as a Service (IaaS)
- b) Platform as a Service (PaaS)
- c) Software as a Service (SaaS)
- d) Function as a Service (FaaS)

4. Which of the following is NOT a potential benefit of adopting cloud computing?

- a) On-demand provisioning
- b) Improved scalability
- c) Improved disaster recovery
- d) Lower dependence on outside vendors

5. Which of the following is a challenge in network virtualization?

- a) Resource overprovisioning.
- b) Limited scalability.
- c) Increased latency
- d) Incompatible protocols.

6. What is the primary benefit of using containers in a cloud environment?

- a) Improved physical hardware utilization
- b) Application isolation and portability across environments
- c) Faster physical server provisioning
- d) Enhanced network performance

7. Which testing method is used to push a cloud application beyond normal operating conditions?

- a) Penetration testing
- b) Functional testing
- c) Load testing
- d) User acceptance testing

8. Which of the following is NOT a characteristic of cloud computing?

- a) Resource pooling
- b) Rapid inelasticity
- c) On-demand self-service
- d) Broad network access

9. Which phase of cloud migration involves the selection of appropriate cloud service models and providers?

- a) Assessment and planning
- b) Vendor evaluation
- c) Application migration
- d) Testing and validation

10. Which of the following is a key characteristic of a baseline?

- a) It is a static configuration file used for system restoration
- ☒ b) It represents a snapshot of normal system performance or behavior
- c) It applies to security configurations in a cloud environment
- d) It eliminates the need for system monitoring tools

11. In which cloud service model is the customer responsible for managing the operating system and applications?

- ☒ a) IaaS
- b) PaaS
- c) SaaS
- d) DBaaS

12. In VM sizing, what does the overcommitment ratio of 3:1 refer to??

- a) Three physical CPUs per VM
- ☒ b) Three vCPUs for every one logical thread
- c) Memory assigned to three VMs
- d) Three vCPUs per VM

13. Which approach involves modifying the architecture of applications to leverage cloud-native features and capabilities?

- a) Rbuild
- b) Rehost
- c) Replatform
- ☒ d) Replace

14. Which consideration is important during cloud deployment execution for ensuring security?

- a) Connectivity issues
- ☒ b) Network Configuration
- c) Scalability and Elasticity
- d) Compliance Management

15. In a hybrid cloud setup, what is the cloud bursting strategy?

- a) Ensures consistent backup
- b) Reduces latency in private networks
- c) Simplifies disaster recovery
- ☒ d) Offloading excess workloads to the public cloud

and what type of migration.
b) 1st & 2nd migration

Q2. Short Answers Questions (15 marks)

1. What is the significance of measuring KPIs before beginning a cloud migration? (1 POINT)

KPI is a (key performance indicator)

Collect it in Baseline to know the indicators for performance for the machine before decide for what type of migration

Allen has been tasked with the design, development, and optimization of automation processes. What could be used to describe his current set of tasks? (2 POINTS)

~~automation improvement~~

Workflow for enhance the automation process.
→ Plan or Path or procedure we depend on it when we do the automation.

and its like a Room in hotel (شقة في فندق، شقة)
 which is allocated by the hotel (التي يتم تخصيصها من قبل الفندق)

inside the VM → install OS with all Lib to do many service. (slow,) and it has all basic ex.

Like a house (بيت) ex: Kali Linux.

3. What is the purpose of dynamic memory in a virtualized environment, and how does it relate to overcommitment? (2 POINTS)

The Dynamic memory: every VM takes ~~from~~ from memory as what it needs.

But when The limit for memory is most up to max. we use a overcommitment (تجاوز الحد المسموح به)

4. What are the benefits and drawbacks of using containers over full virtual machines? (2 POINTS) ex: Docker

in containers, we don't need to install a full OS with full Lib we just download an OS specific for container (containers engine) → Docker and Run what we need (Packer, Lightweight) and its

5. What does the term "shadow IT" refer to, and why is it a concern in cloud migration planning? (2 POINTS)

Shadow IT: The app or system that hidden and not showing into face (مخفية عن العين) and how. → we must take it to device if needs to migration or Remove it.

6. Jeff has just been hired by Fictional Corp as a systems administrator. He is told that one of his responsibilities is going to be the backup processes used for on-premises systems in the company's data center. He is told about documentation that he should use to make sure that everything is done correctly. What type of documentation was he referred to? (2 POINTS)

→ SOP: Standard operating procedure. For every company, must have SOP unique for it.

7. Uma has been analyzing the performance and baselines from her virtual machines that are on a cloud service provider's platform. She sees that they do not appear to be performing up to the standards that her cloud service provider guarantees. What is a document outlines the standards that they are guaranteeing? (2 POINTS)

So The company Does not exist the goal for The performance.

→ Re Document it, then Re do The phase to enhance, edit The plan

8. How does automation improve cloud migration workflows? (1 POINT)

becaus its → Reduce mistake → Reduce human errors. Then Re do The phase.

9. What potential problem arises when VMs are assigned dynamic storage? (1 POINT)

① Randomly registration SOL: Make The storage static.

② No Max Limit → SOL: Overcommitment.
